

NON FUNGIBLE TOKENS **YEARLY REPORT**

2018

NonFungible.com

© All Rights Reserved

FOREWORDS

For this first report, we would like to express our sincerest thank you to NFT.NYC for their proposition to participate in this major event, as well as for their help in delivering this report. We would also like to thank CoinGecko who trusted us and gave us the idea to initiate this report, which is the little brother of CoinGecko's quarterly cryptocurrency report, for which we have the honor to contribute to.

Our goal with this annual report is primarily to inform the mainstream about the growth of this market, driven by non-fungible tokens. We firmly believe that the advent of this new typology of assets will pave the way for real, healthy, viable, and long-term use of the Blockchain, far from speculative drift.

Finally, we would like to thank our entire community and our faithful members who have provided us with valuable advice and feedback throughout the development of this report and our platform.

We hope this first edition will give you a fresh look at this ecosystem and the booming NFT economy.

Enjoy reading,

Daniel Kelly & Gauthier Zuppinger

FEW WORDS ABOUT
2018

WHAT ARE NON-FUNGIBLE TOKENS?

Fungible [fuhn-juh-buhl] – adjective

(especially of goods) being of such nature or kind as to be freely exchangeable or replaceable, in whole or in part, for another of like nature or kind.

Source: [dictionary.com](https://www.dictionary.com)

Non-fungible tokens (or NFTs) are a new class of digital assets stored and handled on a blockchain. These assets are characterized as **unique, irreplaceable** and **non-interchangeable**.

Non-fungible tokens are not cryptocurrencies. They are not traded on exchanges like any other tokens. They are not built on the same technical standards (ERC-721 on Ethereum).

FUNGIBLE

NON-FUNGIBLE

NFTS ARE THE FUTURE OF BLOCKCHAIN

Blockchain technology was originally designed to allow censorship-resistant financial transactions, without relying on traditional financial institutions. Cryptocurrencies and more generally, the blockchain, have allowed the emergence of incredible projects but, have also generated large drifts including the speculative bubble in 2017 / early 2018.

The appearance of NFTs and the use cases that they make possible on Blockchains today, open the doors to a whole new world of possibilities: Collectables (cards, objects, ...) Gaming (RPG, platform games, ...), digital art, certifications ...

We believe that a new era of mass adoption will rise from NFTs.

2018: THE #BUIDL YEAR IN FIGURES

\$205 899 587

TOTAL USD TRADED

7 662 072

TOTAL TRANSACTIONS

366 120

TOTAL ETH TRADED

16 months

THE ERC-721 STANDARD HAS BEEN DEFINED IN AUGUST 2017. ALL THOSE FIGURES ARE BASED ON A TECHNOLOGY THAT WAS BARELY ONE YEAR OLD.

NFTS ARE CROSS-BLOCKCHAIN!

BITCOIN (BTC)

The original non-fungible token, “colored coins”, may be used to represent different asset classes. The first non-fungible token experiments used CounterParty’s infrastructure, RarePepe and Spells of Genesis. CounterParty provides the infrastructure to build and deploy fungible or non-fungible assets on the Bitcoin network as well as the wallets and blockchain explorers for users to view and interact with their assets. High transaction fees and slower network confirmations played a major role in restricting the non-fungible asset and blockchain gaming use-case presented by NFTs.

EOS (EOS)

Design and development led by the team at Unico Global, “dGoods”, the non-fungible standard for EOS, promises the same incredible throughput and small transaction fees of more centralized blockchain solutions. EOSKnights claims to attract an incredibly high user base and is likely largely due to the improved user experience of transaction speed and cost.

STELLAR (XLM)

Non-fungible tokens on the Stellar blockchain are possible but come with their drawbacks. Although not officially supported as a standard, NFTs may be created by backpacking on Stellar’s accounts feature. Every asset should become its own “account”, or individual fungible token with a supply of one. This requires the account to conform to the minimum eligibility criteria and cannot be traded on Stellar’s native DEX platforms.

ETHEREUM (ETH)

The first non-fungible token proposal on Ethereum is based on the initial draft by Dieter Shirley of the CryptoKitties team and finalized by lead author William Entriken and a large community of supporters. ERC721 has been through rigorous testing by hundreds of projects, ran through an official bug bounty, and is largely considered THE non-fungible token.

TRON (TRX)

Touting similar advantages as EOS, Tron’s NFT token has seen good support from publishers such as Blockchain Cuties, and EverDragons. Tron is attracting developers of the blockchain gaming industry and coining the term “Dgaming” on the Tron blockchain.

NEO (NEO)

Led by the team at HashPuppies, NEP-11 puts non-fungible assets on the NEO blockchain. NEP-11 has been changed to the “accepted” state as of October 2018 and is the defacto standard of NFT on NEO.

NEM (XEM)

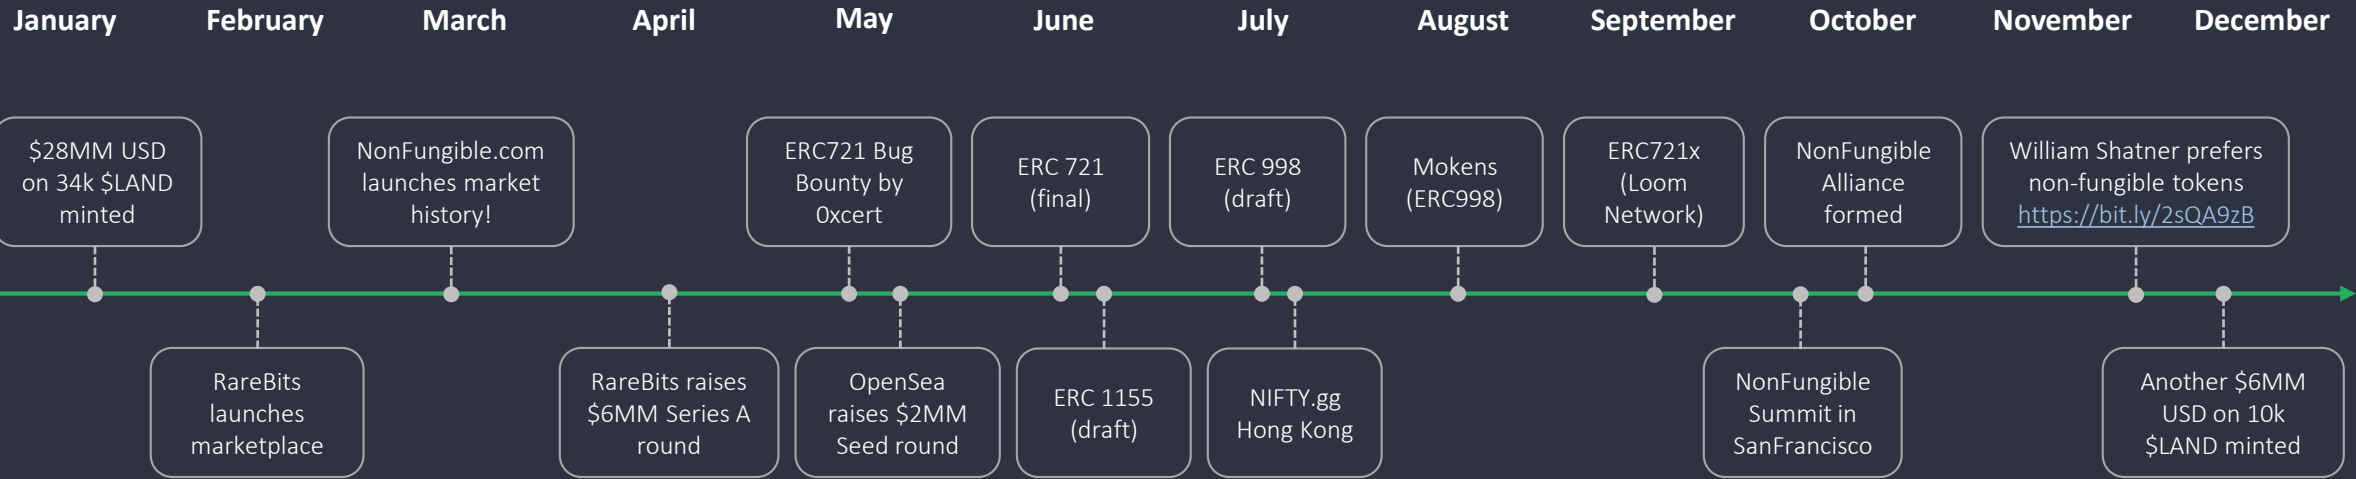

@aleixmorgadas on Github has been working on “nem2-nonfungible-asset” since May 2018, and some projects have started working with it. NEM utilizes an experimental “proof-of-importance” consensus algorithm to achieve decentralization. Like proof-of-stake, POI provides high transaction throughput over the NEM blockchain.

FOCUS ON: DECENTRALAND
MARKET ANALYSIS

WHAT IS DECENTRALAND?

Decentraland is a virtual reality platform where “LAND” ownership is stored on the Ethereum blockchain. Users can create, experience, and monetize content and applications on the LAND using Decentraland’s SDK. LAND in Decentraland is permanently owned by the community, giving them full control over their creations.

Users claim ownership of virtual land on a blockchain-based ledger of parcels. Landowners control what content is published to their portion of land, which is identified by a set of cartesian coordinates (x,y). Content can range from static 3D scenes to interactive experiences such as puzzles and games.

Background image from Decentraland Project (All Rights Reserved)

VALUE HEAT MAP

This heat map presents the average purchase price of \$LAND based on all transactions made on the marketplace from March 19, 2018.

We have included the second auction sales, which reflect how the market perceives the value of these parcels and provide relevant volume to the map.

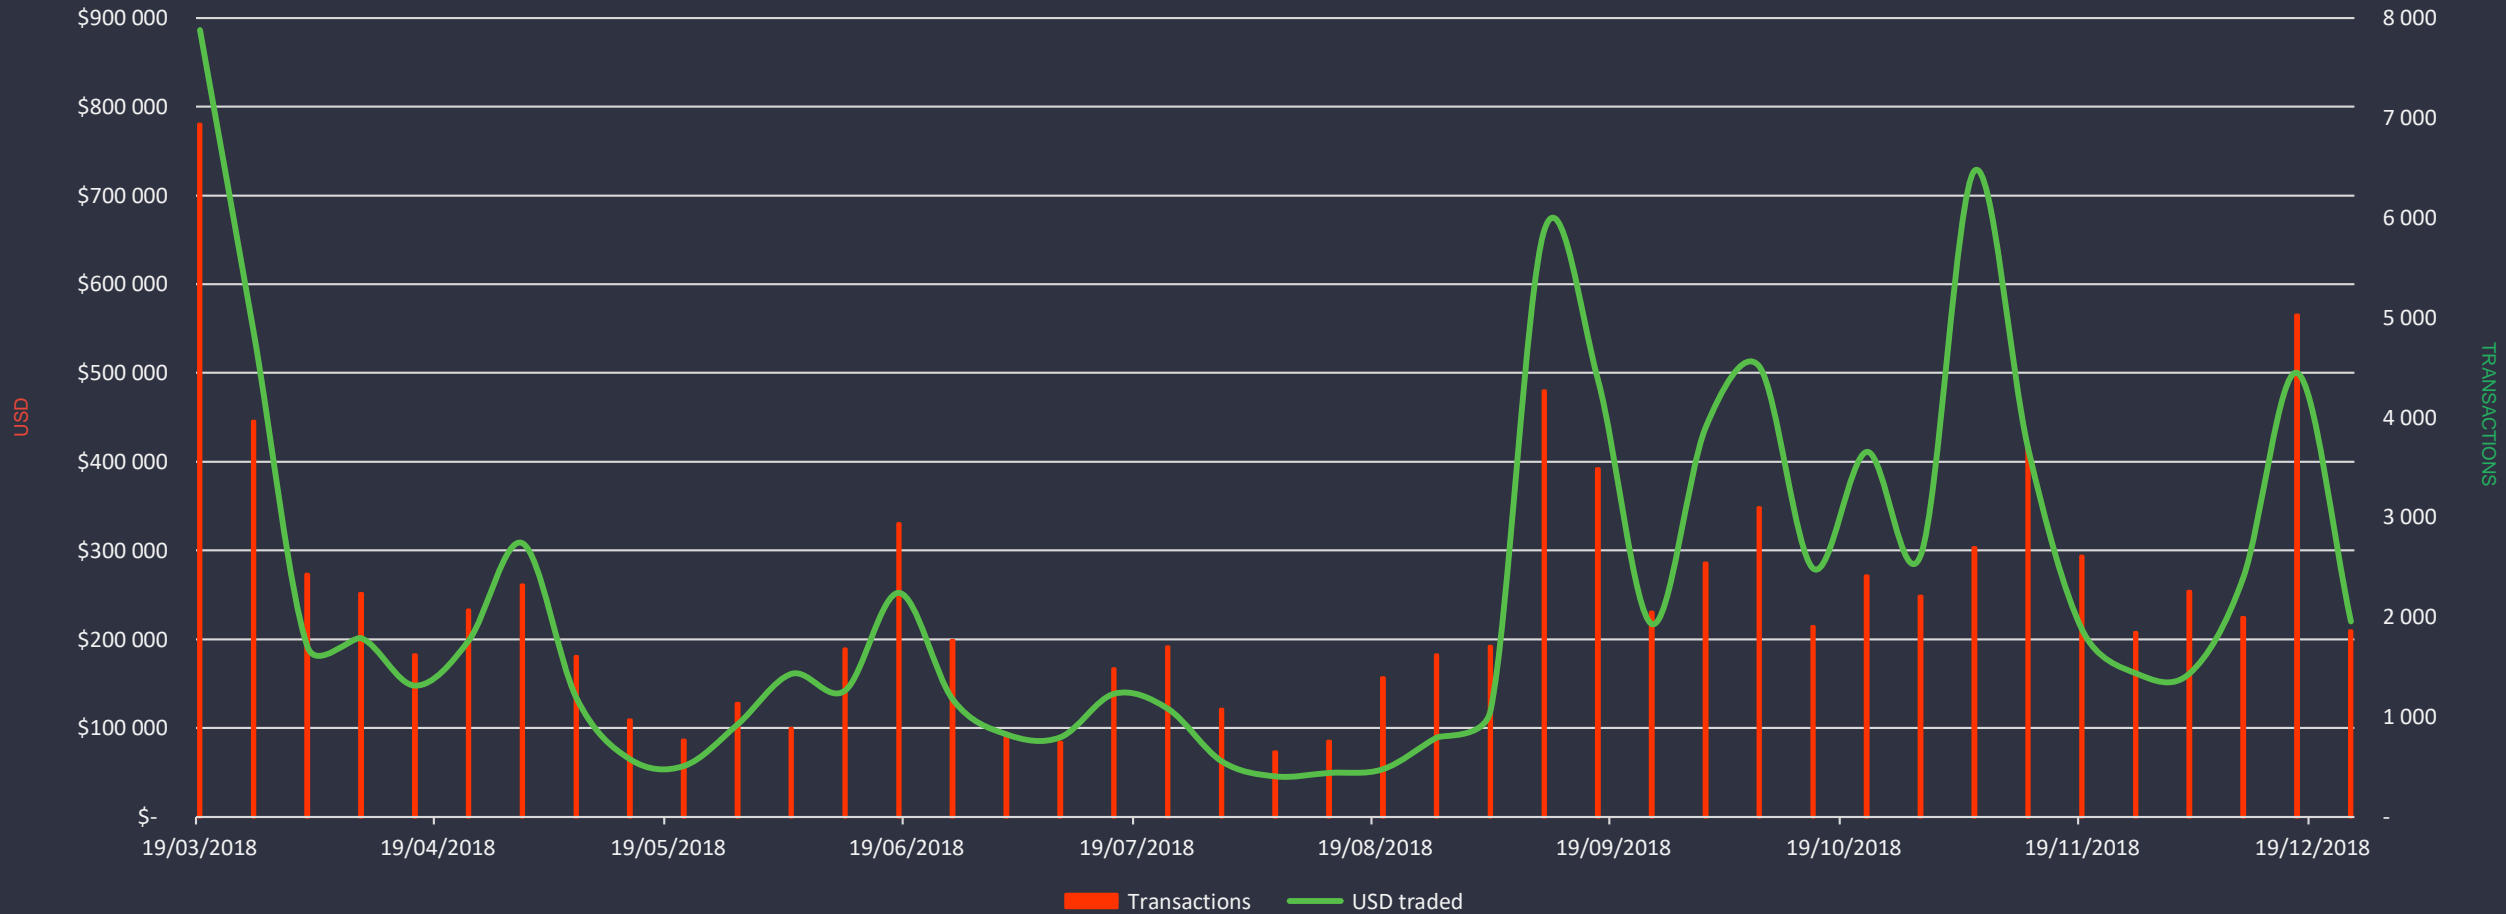

CAPTION

DECENTRALAND – LAND TOKEN PRICE

WEEKLY EVOLUTION OF \$LAND TOKEN (ERC-721) PRICE IN USD AND \$MANA (ERC-20) THROUGHOUT 2018

The gap between the two lines illustrate the relative autonomy of the ERC-721 tokens economy vis-à-vis the ERC-20 tokens. The \$LAND (ERC-721) price was not necessarily indexed to the \$MANA (ERC-20) course. Specific events within the project have an impact on the ERC-721 token, regardless of the price of the cryptocurrencies to which the NFTs are associated.

FOCUS ON: CRYPTOKITTIES
MARKET ANALYSIS

CRYPTOKITTIES – MARKET EVOLUTION

WEEKLY EVOLUTION OF CRYPTOKITTIES SALES VOLUME (USD vs. TRANSACTIONS)

PRICE EVOLUTION PER CATTRIBUTE

During our analysis of the CryptoKitties market, we decided to study separately the various "Cattributes" and to follow the relative value of each trait through time. The following charts and analysis are based on almost 2 million transactions tracked in 2018 on the official Cryptokitties Marketplace.

The following slides display the evolution over time of the 10 most popular traits for each "Cattribute" to ease the readability of the charts. The fancy or exclusive kitties sales have been excluded as they are not based on traditional Cattributes.

We know that the evolution of other traits may be of interest to some users. If you want to know more about the data and charts not displayed in this report feel free to reach us:

hello@nonfungible.com

In addition to this report, we propose to find the average price of every possible combinations of "Cattributes", based on all transactions recorded in 2018. We have found more than **1 MILLION** different combinations. We hope this tool would allow everyone to know the average value of every Kitty based on market history:

NFT PROJECTS TO FOLLOW
IN 2019

NFT PROJECTS TO FOLLOW IN 2019

At the end of 2018, we carried out an inventory of all decentralized applications minting, using, or editing non-fungible tokens, based on ERC-721 standard (Ethereum). We have identified, qualified, or tested more than 400 different applications, games and NFT projects. Some of these projects were just breathtaking, and others, more surprising. During this overview, we had confirmation that the ecosystem of crypto-gaming and NFT is moving to the next level: 2019 promises to be an incredible year.

0x Universe

Grow your empire by acquiring and developing planets, each unique. Manage your resources, expand your territory to conquer a map The size of a galaxy! Note that the graphics offered by the game are spectacular!

Conquest

Strategy

Axie Infinity

One of the most popular fighting and arena games of 2018! Select 3 small creatures (named Axie) and be strategic in organizing your team. The combination of the right skills and their positioning in the arena will ensure your victory!

Arena

Fight

Chainbreakers

This RPG fully integrated into Decentraland and will allow you to follow a series of quests through the metaverse. Players will discover the virtual world in 3D via quests, battles, and rewards using space designated from private LAND owners.

Quest

RPG

Coin.Kred

These personalized badges make it possible to reflect who you are and to highlight your passions. If you have a little extra imagination, you can also produce exclusive badges that may be then be sold on the marketplace!

Social

Badges

NFT PROJECTS TO FOLLOW IN 2019

Cryptoink

Have you ever dreamed of organizing virtual pig races? This crazy game allows you to buy, collect, breed and organize races with your pigs! The game is as addictive as it is crazy!

Race

Game

CryptoKaiju

The first collectible vinyl toy with ownership and identification represented by an NFT. These characters were introduced by the team behind KnownOrigin and are definitely a strong project to consider for anyone interested in digitally, and physically, provably scarce collectibles.

Toy

Collectables

CryptoKitties

Requiring no introduction as the most popular NFT, it's all about collecting and breeding virtual kittens, each one as cute as the other. These kittens can then be used in the KittyVerse, through fighting games, racing, and other community built experiences.

Collectables

Kitties

CryptoPunks

The original non-fungible token on the Ethereum blockchain. These assets are all about scarcity, so much so that there are only 10,000 unique punks in existence, ever. Those yelling that punk's not dead, now, you can prove it. Another must-have in every enthusiast's collection.

Collectables

Digital Art

CryptoRome

Make your cities prosper in ancient Rome, manage your resources and expand your influence. If you liked strategy games, you will love CryptoRome! Note that cities or resources that you collect in the game can then be sold against Ethereum!

Game

Strategy

CryptoVoxels

Imagine Minecraft, the blockchain, a real economy and in which you could navigate in Virtual Reality: here is CryptoVoxels. This project is still under construction but promises very interesting prospects in the coming years.
